Implementing Brocade Encryption Solutions

(ENC 202-WBT)

Web-Based Training (eStudy)

BROCADE EDUCATION SOLUTIONS

DESCRIPTION:

This self-paced, web-based training course (eStudy) is intended to provide basic and some advanced training on Brocade encryption solutions. Attendees of this course will learn general encryption solution capabilities, processes, design best practices, basic configuration steps and troubleshooting.

Note: We recommend that encryption implementations include Professional Services. Professional Services engagements include a transfer of information to ensure that customers can manage the encryption solution after it is implemented. Please contact your Brocade representative for additional information about how to engage Professional Services for your solution.

DURATION:

10 hours

FORMAT:

Self-paced, web-based training (eStudy)

PREREQUISITES:

Working knowledge of:

- Complete the ENC 101 Web-Based Training (WBT)
- 4-6 months experience with Brocade Fibre Channel products
- A firm understanding of:
  - Fibre Channel processes
  - Brocade SAN Administration
  - Brocade SAN Design
  - Brocade SAN Management

AUDIENCE:

Technical engineers intending to purchase and support (level 1 and 2) Brocade encryption products for a SAN and wanting additional knowledge of the Brocade BES, FS8-18, and encryption solution capabilities.

OBJECTIVES:

Upon successful completion of this course, the student should be able to:

- List some of the motivators, key terms, concepts and processes related to SAN data encryption.
- Describe major components and methodologies of encryption solutions.
- Describe supported Brocade encryption solution architectures.
- Define Brocade Encryption Switch (BES) and FS8-18 application blade hardware components and Field-replaceable Units (FRU)s.
- Configure a Brocade encryption node and group.
- Complete the registration of encryption nodes using a NETAPP LKM key vault.
- Configure a Brocade encryption solution cryptotarget container and an encryption HA cluster using a BES and a Brocade Datacenter Backbone (DCX) with an FS8-18 application blade.
- Describe how to troubleshoot a basic encrypted SAN implementation.
