

The Savings CONVERSATION

Feds are saving money by either fully or partially implementing key IT infrastructure initiatives:

70%

Remote Access

62%

Consolidation

53%

Virtualization

50%

Diversification

38%

Cloud Computing

That's a good start.
But agencies say,
"we can do better."

These efforts translate to

\$8.5B
annual savings

(that's 10% of IT budgets)

If all key initiatives were fully deployed ...

x2

...that number could more than double.

Remote Access

Consolidation

Virtualization

Diversification

Cloud Computing

\$19.7B/year

(that's 24% of IT budgets)

But, agencies must update their networks to handle the load

Focus on the network:

Respondents say that the network is most vital to enabling efficiencies and cost-savings opportunities

Two thirds of respondents say their current networks are ill-equipped to support these initiatives

Magic "Show Me the Money" Number?

26

To maximize cost-savings, network managers estimate they would need to change **26%** of their current network infrastructure, and increase their network capacity by an average of **26%**

Find out how you can double your agency's savings.
