

Chichester High School

EXECUTIVE SUMMARY

Challenge

Create a superior wireless learning experience for students while eliminating worries about network performance, reliability, and longevity

Solution

- Brocade ICX 6610 Switches for core routing
- Brocade ICX 6450 Switches for distribution
- Brocade Network Subscription for risk-free acquisition

Results

- Ensured reliable network lifecycle and support
- Improved student login times and learning productivity dramatically
- Minimized management tasks for the lean IT staff

Mobility, Flexibility, Reliability Have Finally Arrived.

Combining a boys' school and girls' school into one coeducational institution was difficult enough. Having to simultaneously upgrade and merge separate technology infrastructures in order to deliver an outstanding educational experience to all 1,500 students simply added to the challenge.

Located in Chichester, West Sussex, England, Chichester High School for Boys and Chichester High School for Girls are secondary schools for students ages 11 to 16. The schools' alumni, such as Tim Peake, a current European Space Agency astronaut, have enjoyed success in their careers thanks to the high-quality learning experience that the schools provide. However, time had taken a toll on the schools' networks.

Much of the curriculum relies on wireless connectivity. Teachers' laptops are the foundation for delivering lessons and online content. In addition, students can bring their phones and tablets to school and use its free, open wireless environment. However, with the rapid growth of wireless usage, the slow, obsolete wired network could not keep pace. Because of the large number of students logging in at once, it could take up to 20 minutes for students to log in, which wasted valuable teaching and learning time. Inevitably, connections were dropped and network performance slowed to a crawl.

"A responsive network is vital to ensuring a productive and high quality learning experience," said Jim Turner, Network Manager at Chichester High School. "Clearly we needed to replace networks in both schools, and I wanted a network solution and vendor that could offer a resilient, future-proof network within our budget."

Turner and his lean IT staff knew exactly what they wanted. The school needed a 10 GbE network to support modern teaching and learning—and preferably, one that can scale as needed. The new network had to efficiently power a new wireless network, regardless of vendor. The new wireless network would replace an underpowered wireless LAN and enable seamless roaming between the boys' and girls' school sites.

Chichester High School wanted enterprise-class wired and wireless infrastructures that could support the school's needs for the next 10 years. Finally, the new network had to be easily managed in-house without requiring costly ongoing support and maintenance

WHY BROCADE

“I’m impressed by the network’s reliability. There hasn’t been anything we need to do, except occasionally change a VLAN configuration. You put it in and it works. I thought that being such a large, powerful network surely it should take more of my time, but it doesn’t.”

— Jim Turner, Network Manager at Chichester High School

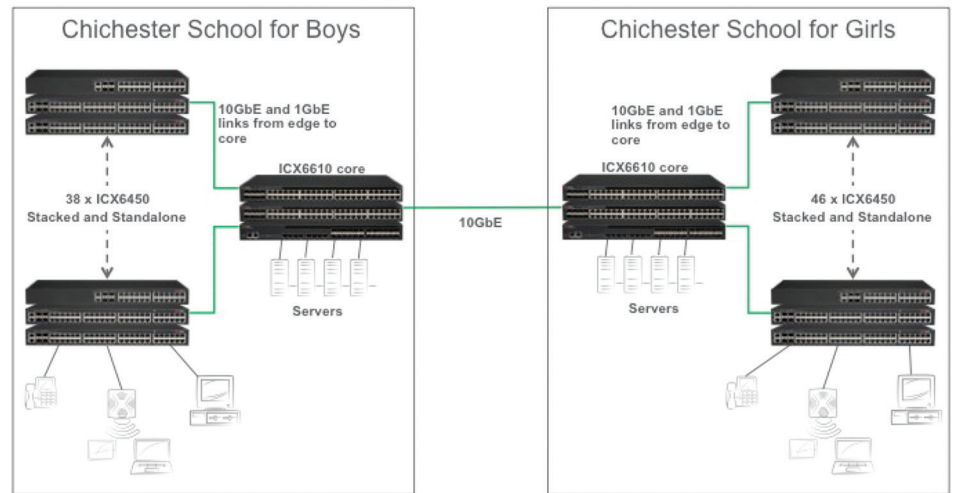

Figure 1: Chichester High School Combined Network.

contracts. Chichester High School narrowed its choices to three wired networking vendors, one of which was Brocade, as well as several wireless vendors, one of which was Ruckus. The school chose the Brocade® solution based on its technical capabilities, rapport with the Brocade team, and a game-changing purchasing option.

“It should be simple, but only Brocade and Ruckus got the approach right,” aid Turner. “The Brocade sales team didn’t try to sell me according to their interests. Our Brocade account executive asked me exactly what I needed and that’s what I got. He knew our budget and he tailored the network to our technical and fiscal requirements.” Turner chose Ruckus for its great features and ability to deliver exactly what he wanted.

Not only did Turner acquire enterprise-grade networks within his budget, he was able to future-proof the school’s investment by acquiring the wired network through Brocade Network Subscription. Brocade Network Subscription is a risk-free way to invest in new technologies, projects, and services. It allowed Chichester High School to subscribe to exactly what it needs today, with support included and no up-front cash required.

It can upgrade and expand at any time, or cancel with 60 days’ notice. By acquiring its solutions as a service, the school gains control over its network with the flexibility to navigate the future on demand.

Building a Robust Platform for an Excellent Educational Experience

Chichester High Schools’ new networks are based on Brocade ICX® 6610 and Brocade ICX 6450 Switches. Brocade ICX 6610 Switches form the network core, providing fast, ultra-reliable switching in a highly economical design. The stackable form factor delivers the enterprise-class capabilities of a chassis with the flexibility and cost-effectiveness of a stackable switch. The Brocade ICX 6450 Switches offer a highly manageable networking switch in a flexible, stacking architecture with Layer 3 routing capabilities.

At the network core, Brocade ICX 6610 Switches deliver wire-speed, non-blocking performance across all ports to support latency-sensitive applications such as real-time voice and video streaming. Brocade stacking technology provides unmatched availability with four redundant 40 Gbps stacking ports per switch, hitless stacking failover, hot switch replacement, and dual hot-swappable power supplies and fans. Layer 3 features

perform 10 Gbps Open Shortest Path First (OSPF) routing between the two sites with high performance.

The core connects to Brocade ICX 6450 Switches in multiple buildings. Brocade ICX 6450 Switches function as a single-cable solution and are deployed as standalone switches and also stacked where required. The Brocade ICX 6450 Switches deliver both Power over Ethernet (PoE) power and data across network connections, as well as 10 GbE dual-purpose uplink or stacking ports for maximum flexibility. If needed, Brocade HyperEdge® Shared Services enable the school to extend premium Brocade ICX 6610 Switch services to the Brocade ICX 6450 Switches to scale capabilities as well as capacity.

Today, the Chichester High School for Boys' and Chichester High School for Girls' networks are joined with a 40 Gbps link. As the school consolidation is completed in 2016, the Chichester Girls' School will become the primary data center and the Chichester High School

for Boys' infrastructure will handle load balancing and failover.

Open Mobility for Best-in-Class Capabilities

By choosing Ruckus for its WLAN, Chichester High School achieved best-in-class wireless capabilities. Brocade and Ruckus are collaborating to deliver integrated, open, scalable, high-performance enterprise network solutions. The Brocade open wired network underlay infrastructure provides the performance and scalability essential to supporting wireless growth without having to rip and replace equipment. Ruckus Smart Wi-Fi and patented BeamFlex+ technology deliver high-quality wireless connectivity, while Brocade ICX Switches with link aggregation provide the ideal backhaul for Ruckus 802.11AC Wave 2 R710 access points, which offer 2.5 Gbps throughput for high availability and performance.

Separate and Secure

Chichester High School uses the Brocade ICX 6610 Switches to route wired and wireless traffic, as well as to manage access control and security for both types of traffic. Three separate Service Set Identifiers (SSIDs) separate wireless traffic between the free-use wireless network, Internet-bound traffic, and internal, school-owned devices. The separate SSID for internal devices also allows access to servers.

"The Brocade engineers recommended this approach, and it has been bombproof," said Turner with a grin, "in spite of 1,500 teenaged kids trying to hack our system daily."

Rapid, Easy Deployment

It took only two weeks—performed over a school holiday—to remove all of the old networks in the Chichester High School for Girls and install and test the new equipment. When everybody returned after the holiday, nobody realized what had happened.

"Brocade has excellent partners," said Turner. "They know the products really well and we knew exactly what was going to happen from day one. Everything was deployed on time. It's nice when nobody realizes that you basically pulled the floor from under them and replaced it."

Boring Wireless Integration

When asked to describe the wired-wireless integration between Brocade and Ruckus, Turner laughed. "It was very unexciting," he said. "All we did was plug the wireless access point into the switch with PoE turned on and off it went. There was nothing glamorous to talk about."

The Best Learning Support Has No Surprises

Watching network service levels during the course of a day has proved to be similarly unexciting. In spite of the fact that every hour students log off the network and then log back in a few minutes later for their next class, these massive usage peaks no longer affect network services or performance. Whereas it could take 20 minutes to log into the old network, Turner and his staff no longer see an impact. Even when deploying 400 iPads, Chichester High School used the Brocade ICX 6610 Switches to route iPad traffic using access control lists to prevent broadcasting across the network and the solution has worked beautifully.

Time Savings from High Reliability and Performance

Both networks are now connected with a 40 Gbps link and the operations in place to bring the two schools together. Turner and his team replaced the Chichester High School for Girls network first and then turned their attention to the network in the Chichester High School for Boys. The network's high reliability and high performance have caused teachers and staff to remark on how fast they can get to the Internet and retrieve files.

"I'm impressed by the network's reliability," said Turner. "There hasn't been anything we need to do, except occasionally change a VLAN configuration. You put it in and it works. I thought that being such a large, powerful network surely it should take more of my time, but it doesn't."

Learning to manage the new Brocade infrastructure was easier than expected. "My prior skills were easily transferable to the Brocade switches," said Paul Masters, Assistant Network Manager at Chichester High School. "We also found it much easier to implement things like the open wireless environment for a single room and to support the BYOD initiative."

Flexible Procurement Future Proofs the Network

Brocade Network Subscription allowed Chichester High School to future-proof its new network in ways that Turner had previously not imagined. Flexible terms and the ability to upgrade on demand, replace gear, or adapt the network as needed eliminate worries about the future. Turner knows that not only is the Brocade equipment lifecycle guaranteed, so is Brocade support.

"Brocade Network Subscription is awesome," said Turner. "There's no other word for it. When I originally sent the details to our finance director, he was immediately on the phone telling me to take the deal and that it was the best thing he'd seen. The program is a tremendous help to our school and it made me look good to the people that employ me, which is great."

Outstanding in Every Way

Although Chichester High School is not a corporate business, Turner knows that a top-tier network is simply essential to its mission.

"As a tech person, we like shiny new switches and it's more fun to come to work," he laughed. "But the great thing about the Brocade and Ruckus networks is that the school is just a better place for our teachers, staff, and students to work in too. We like knowing that we can give our school the best value for education."
